4GI

pod -> scheduler -> whether cpu and memory exist on node or

k8s project-> microservices-> 9 types of microservice -> p1(2,300MI/4/600MI),p2(4cpu,1GI),p3,p4,p5,p6,p7,p8,p9

20 cpus, 200GB => nd3.highmemory. => node type

cpu 250m

1 core CPU = 1000m

500m = 0.5 core CPU

250m = 0.25 CPUs

2cpus = 2000m

1Gi =1GiB
2Gi=2GiB

scheduling:
==========
CPU: 4 cores
Memory: 16Gi

pod requests: 2 /8GI

scheduler will look at requests(min)

cpu execeed -> throttling

memory exceed -> OOM killed 137
