PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with strong expertise in CI/CD pipeline implementation, leading infrastructure automation and container orchestration across AWS and GCP cloud platforms.

PROFESSIONAL SNAPSHOT

- Designed and maintained Jenkins CI/CD pipelines to automate application build, testing, Docker image creation, and deployment processes.
- Integrated Jenkins with Git/GitHub repositories to trigger automated builds and deployments based on code commits and pull requests.
- Configured pipeline stages for source code checkout, compilation, unit testing, security validation, artifact creation, and deployment.
- Implemented Jenkins declarative pipelines, credentials management, environment variables, and build parameters to standardize deployment workflows.
- Created and maintained optimized Dockerfiles and Docker images for containerizing applications and their dependencies. Managed Docker containers, images, networks, volumes, and registries across development and deployment environments.
- Implemented multi-stage Docker builds to reduce image size and improve application deployment efficiency.
- Integrated Docker image building and tagging into Jenkins CI/CD pipelines and pushed images to container registries.
- Deployed and managed containerized applications on Kubernetes clusters using Deployments, Services, ConfigMaps, Secrets, and Ingress resources.
- Created and maintained Kubernetes YAML manifests for application deployment, scaling, service exposure, and configuration management.
- Implemented Kubernetes rolling updates, rollbacks, health checks, resource requests/limits, and horizontal scaling to improve application reliability.
- Troubleshot Kubernetes workloads by analyzing Pods, Services, Events, logs, deployments, and cluster resources using kubectl.
- Provisioned and managed Google Cloud infrastructure including Compute Engine, VPC networking, IAM, GKE, and Cloud Storage.
- Deployed and managed containerized applications on Google Kubernetes Engine (GKE) and configured cluster resources for application workloads.
- Implemented Google Cloud IAM roles, service accounts, and access policies following least-privilege principles.
- Monitored and troubleshot GCP resources using Cloud Monitoring, Cloud Logging, and GCP Console/CLI to maintain application availability.
- Developed reusable Terraform configurations/modules to provision and manage GCP infrastructure using Infrastructure as Code (IaC).
- Managed infrastructure lifecycle using Terraform commands such as init, plan, apply, validate, and destroy.
- Implemented Terraform variables, outputs, locals, state management, and environment-specific configurations for scalable infrastructure provisioning.
- Integrated Terraform with Jenkins CI/CD pipelines to automate infrastructure validation, planning, and deployment.

ACADEMIC CREDENTIALS

Computer Science and Engineering (2020)
RL Jalappa Institute of Technology

12th PUC
Swami Vivekananda PU College, Bangalore, Karnataka

EXPERIENCE

Capgemini Technologies PVT LTD India — May 25, 2021 to Present
117 & 118, Divyasree Technopark Main Rd, EPIP Zone, Whitefield, Bengaluru, Karnataka 560066

TECHNICAL SKILLS

Operating Systems	Linux, Ubuntu
SCM	GIT, GitHub, GitLab & Bitbucket
Build Tool	Maven
CI/CD Tools	Jenkins (Groovy)
Web/Application Server	Apache Webserver, Apache Tomcat
Containerization	Docker, Kubernetes
Configuration Management Tool	Ansible
Cloud Infrastructure	AWS Stack (EC2, S3, VPC, EBS, ELB, Auto Scaling, CloudWatch, Route 53, IAM); GCP (Compute Engine, VPC, IAM, Cloud Storage, Cloud SQL, Cloud Functions, Pub/Sub, Cloud Monitoring, Cloud Load Balancing, Auto Scaling, Cloud DNS)
Data Base	PostgreSQL
Artifactory Repos	SonarQube, Nexus, GAR, Docker Hub
IAC Tool	Terraform
Scripting	Bash Scripting and Python Scripting

PROJECTS SUMMARY

About Project:

Centralized Payment Hub Gateway (PHG) is a cloud-based payment platform for **Security Bank Corporation**, a leading bank in the Philippines. The project focuses on modernizing the bank's payment infrastructure through a centralized Payment Hub Gateway built on a microservices architecture and hosted on AWS. I work across both AWS and GCP cloud environments.

From the DevOps perspective, I manage the AWS infrastructure and the Kubernetes environment. The microservices are containerized using Docker and deployed on Amazon EKS. GitHub and GitHub Actions are used for CI, Amazon ECR for container image management, and Argo CD with a GitOps approach for continuous delivery.

Microservices communicate through gRPC for synchronous communication and Kafka for asynchronous, event-driven communication. PostgreSQL is used for persistent data and Redis for caching.

For observability, the platform uses Prometheus and Grafana for metrics, Loki and Promtail for centralized logging, and OpenTelemetry with Tempo for distributed tracing. Secure AWS access is handled through IAM and IRSA, and Velero with S3 provides backup and disaster recovery.

Client:	Security Bank Corporation
Country:	Philippines
Industry:	Banking & Capital Markets
Service Provider:	Capgemini
Project:	Centralized Payment Hub Gateway (PHG)
Role:	DevOps Engineer
Cloud:	AWS and GCP
Architecture:	Microservices
Deployment:	Cloud-based payment platform
Environment:	AWS, GCP (GKE, Compute Engine, VPC, IAM, Cloud Storage, Cloud Monitoring), Terraform, Amazon EKS, Kubernetes, Docker, Amazon ECR, Helm, GitHub, GitHub Actions, Argo CD (GitOps), Prometheus, Grafana, Loki, Promtail, OpenTelemetry, Tempo, Kafka, gRPC, PostgreSQL, Redis, Velero, cert-manager, IAM/IRSA, Bash/Shell Scripting

ROLES & RESPONSIBILITIES

- Designed, implemented, and maintained scalable and highly available AWS cloud infrastructure using Terraform (Infrastructure as Code).
- Provisioned and managed AWS and GCP infrastructure (compute, networking, IAM, storage) as code using Terraform.
- Deployed and managed containerized applications on Amazon EKS (AWS) and Google Kubernetes Engine (GKE) on GCP.
- Managed Amazon EKS clusters and Kubernetes workloads, including Deployments, Services, ConfigMaps, Secrets, StatefulSets, Ingress, and PersistentVolumeClaims.

- Developed and maintained CI/CD pipelines using GitHub Actions to automate application build, testing, security scanning, Docker image creation, and deployment processes.
- Containerized microservices applications using Docker and managed container images through Amazon Elastic Container Registry (ECR).
- Implemented GitOps-based continuous delivery using Argo CD, enabling automated and consistent application deployments to Amazon EKS.
- Created and maintained Helm charts and Kubernetes manifests for deploying and managing microservices across different environments.
- Managed AWS networking components including VPC, public/private subnets, Internet Gateway, NAT Gateway, Route 53, Network Load Balancer, and security groups.
- Implemented secure AWS access for Kubernetes workloads using IAM Roles for Service Accounts (IRSA) and followed least-privilege security principles.
- Managed application configuration and sensitive information using Kubernetes ConfigMaps and Secrets.
- Implemented and maintained Prometheus and Grafana for Kubernetes and application monitoring, dashboards, and alerting.
- Implemented centralized application logging using Loki and Promtail, enabling efficient troubleshooting and root-cause analysis.
- Worked with OpenTelemetry and Tempo for distributed tracing across microservices and analyzed application latency and failures.
- Supported event-driven microservices architecture using Apache Kafka for asynchronous communication between services.
- Worked with PostgreSQL and Redis for persistent data storage, caching, and session management from the infrastructure and deployment perspective.
- Managed TLS/SSL certificates using cert-manager and Let’s Encrypt for secure HTTPS communication.
- Implemented Kubernetes backup and disaster recovery using Velero, with Amazon S3 as backup storage and AWS KMS for encryption.
- Performed Kubernetes troubleshooting and resolved issues including CrashLoopBackOff, ImagePullBackOff, Pending pods, failed deployments, service connectivity, configuration issues, and resource constraints.
- Monitored application and infrastructure health, analyzed logs, metrics, and traces, and participated in production incident management and root-cause analysis.
- Performed rolling deployments and application rollbacks while maintaining application availability during releases.
- Collaborated with development, QA, security, cloud, database, and application support teams to coordinate releases and resolve technical issues.
- Automated repetitive operational tasks using Bash/Shell scripting, Terraform, Helm, and CI/CD pipelines to reduce manual intervention.
- Participated in release management, deployment planning, production support, incident resolution, and continuous improvement activities.
- Followed DevOps, GitOps, Infrastructure-as-Code, security, and automation best practices throughout the application lifecycle.

Place: Bangalore

Yours sincerely
Manjunatha HG
