PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with strong expertise in CI/CD pipeline implementation, leading infrastructure automation and container orchestration.

PROFESSIONAL SNAPSHOT

- Designed and maintained Jenkins CI/CD pipelines to automate application build, testing, Docker image creation, and deployment processes.
- Integrated Jenkins with Git/GitHub repositories to trigger automated builds and deployments based on code commits and pull requests.
- Configured pipeline stages for source code checkout, compilation, unit testing, security validation, artifact creation, and deployment.
- Implemented Jenkins declarative pipelines, credentials management, environment variables, and build parameters to standardize deployment workflows.
- Created and maintained optimized Dockerfiles and Docker images for containerizing applications and their dependencies. Managed Docker containers, images, networks, volumes, and registries across development and deployment environments.
- Implemented multi-stage Docker builds to reduce image size and improve application deployment efficiency.
- Integrated Docker image building and tagging into Jenkins CI/CD pipelines and pushed images to container registries.
- Deployed and managed containerized applications on Kubernetes clusters using Deployments, Services, ConfigMaps, Secrets, and Ingress resources.
- Created and maintained Kubernetes YAML manifests for application deployment, scaling, service exposure, and configuration management.
- Implemented Kubernetes rolling updates, rollbacks, health checks, resource requests/limits, and horizontal scaling to improve application reliability.
- Troubleshot Kubernetes workloads by analyzing Pods, Services, Events, logs, deployments, and cluster resources using kubectl.
- Provisioned and managed Google Cloud infrastructure including Compute Engine, VPC networking, IAM, GKE, and Cloud Storage.
- Deployed and managed containerized applications on Google Kubernetes Engine (GKE) and configured cluster resources for application workloads.
- Implemented Google Cloud IAM roles, service accounts, and access policies following least-privilege principles.
- Monitored and troubleshot GCP resources using Cloud Monitoring, Cloud Logging, and GCP Console/CLI to maintain application availability.
- Developed reusable Terraform configurations/modules to provision and manage GCP infrastructure using Infrastructure as Code (IaC).
- Managed infrastructure lifecycle using Terraform commands such as init, plan, apply, validate, and destroy.
- Implemented Terraform variables, outputs, locals, state management, and environment-specific configurations for scalable infrastructure provisioning.
- Integrated Terraform with Jenkins CI/CD pipelines to automate infrastructure validation, planning, and deployment.

ACADEMIC CREDENTIALS

Computer Science and Engineering (2020)
RL Jalappa Institute of Technology

12th PUC
Swami Vivekananda PU College, Bangalore, Karnataka

EXPERIENCE

Capgemini Technologies PVT LTD India — May 25, 2021 to Present

117 & 118, Divyasree Technopark Main Rd, EPIP Zone, Whitefield, Bengaluru, Karnataka 560066

TECHNICAL SKILLS

Operating Systems	Linux, Ubuntu
SCM	GIT, GitHub, GitLab & Bitbucket
Build Tool	Maven
CI/CD Tools	Jenkins (Groovy)
Web/Application Server	Apache Webserver, Apache Tomcat
Containerization	Docker, Kubernetes
Configuration Management Tool	Ansible
Cloud Infrastructure	AWS Stack (EC2, S3, VPC, EBS, ELB, Auto Scaling, CloudWatch, Route 53, IAM); GCP (Compute Engine, VPC, IAM, Cloud Storage, Cloud SQL, Cloud Functions, Pub/Sub, Cloud Monitoring, Cloud Load Balancing, Auto Scaling, Cloud DNS)
Data Base	PostgreSQL
Artifactory Repos	SonarQube, Nexus, GAR, Docker Hub
IAC Tool	Terraform
Scripting	Bash Scripting and Python Scripting

PROJECTS SUMMARY

About Project:

PLM (Product Lifecycle Management) is a solution for managing the complete lifecycle of a product, based on the ENOVIA V6 software suite from Dassault Systèmes. Our IT Infrastructure practice provides the experience and tools required to help clients create, run and manage all 2D/3D data for vehicle projects, covering the full scope of the digital model, with RUN teams supporting the European automobile industry. The Build team handles application builds for the automobile sector, while the RUN team installs and supports the production applications. As a DevOps Engineer, I support both teams by automating builds, deployments and infrastructure provisioning through CI/CD pipelines and Infrastructure as Code on AWS and GCP, and by keeping the build and deployment environments stable and reliable.

Project 2 - Client: Stellantis

Role: Associate Consultant DevOps Engineer

Environment: Linux, Git, Maven, Jenkins, Groovy, Nexus, SonarQube, Shell Scripting, Python Scripting, Docker, Ansible, Terraform, Apache Tomcat, Kubernetes (EKS/GKE) and AWS/GCP

Duration: Oct 2023 to Till Date

RESPONSIBILITIES

- Experienced in Amazon Web Services (AWS) and Google Cloud Platform (GCP), including AWS services like EC2, S3, ELB, Auto Scaling, AMI, IAM, CloudWatch, VPC and Amazon Workspaces, and GCP services like Compute Engine, VPC, IAM, Cloud Storage, Cloud SQL, Cloud Functions, Pub/Sub, Cloud Monitoring, Cloud Load Balancing, Auto Scaling and Cloud DNS.
- Experience working with version control systems like Git and GitHub.
- Worked on installing and configuring Jenkins nodes.
- Configured Git with Jenkins and scheduled jobs using the Poll SCM option.
- Worked on building and managing Docker containers and images.
- Worked in YAML for writing tasks, handlers, playbooks and roles using Ansible.

- Set up the Continuous Integration/Continuous Deployment (CI/CD) process.
- Built CI/CD pipelines using Ansible, Jenkins and Docker to automate server deployments on AWS and GCP.
- Installed and configured Ansible on the central node and managed hosts; ran ad-hoc commands and playbooks to automate tasks.
- Provisioned and managed AWS and GCP infrastructure (compute, networking, IAM, storage) as code using Terraform.
- Troubleshot and stabilized various environments, resolving build, deploy and environment issues.
- Experience with container-based deployments using Docker, Docker images, Docker Hub, Docker registries, and Kubernetes.
- Used Jenkins pipelines to drive all microservice builds to the Docker registry and deploy to Kubernetes (EKS on AWS and GKE on GCP); created and managed Pods using Kubernetes.
- Built and maintained Docker container clusters managed by Kubernetes using Linux, Bash, Git, and Docker on AWS and GCP.
- Utilized Kubernetes and Docker as the runtime environment of the CI/CD system to build, test, and deploy.
- Involved in developing test environments on Docker containers and configuring them using Kubernetes.
- Developed microservice onboarding tools leveraging Python and Jenkins, allowing easy creation and maintenance of build jobs and Kubernetes deployments and services.
- Configured new jobs in Jenkins as per requirements from the Dev team.
- Installed, configured, and integrated Maven with Jenkins.
- Changed POM configuration in Jenkins (e.g., Maven command for including test cases).
- Performed builds and deployments in various environments (DEV, QA, etc.) across AWS and GCP.
- Docker: created new containers, mounted volumes and started services.
- Responsible for managing configuration management tools like Git.
- Helped developers with build, release, SCM, and build setup issues.
- Troubleshot builds and other issues with the Dev team and resolved them.
- Verified logs when build fails.
- Verified deployment logs to confirm successful deployments.
- Automated manual processes by writing Shell scripts and Python.

Project 1 - Client: Total Energies

Role: DevOps Engineer

Environment: Linux, Git, Maven, Jenkins, Nexus, SonarQube, Shell Scripting, Python, Docker, Ansible, Apache Tomcat and AWS

Duration: May 2021 to Oct 2023

RESPONSIBILITIES

- Managed Git configuration, branching and merging, resolved conflicts, and pushed changes.
- Configured and managed AWS services like EC2, S3, EBS, RDS, VPC and IAM, and GCP services like Compute Engine, Cloud Storage, Persistent Disk, Cloud SQL, VPC and IAM.
- Configured and maintained Jenkins to implement the CI process and used Maven to schedule the builds.
- Built EC2 servers on AWS and Compute Engine VMs on GCP, imported volumes, and created auto scaling, load balancers, Route 53/Cloud DNS and SNS/Pub/Sub.
- Wrote reusable Terraform templates to build staging and production environments on AWS and GCP.
- Configured Ansible to manage AWS and GCP resources and automate the build process for AMIs and custom GCP images used by all application deployments.
- Created Terraform templates to build custom VPCs, NAT/Cloud NAT, S3/Cloud Storage, and RDS/Cloud SQL to deploy web applications and databases.
- Managed deployments on EKS (AWS) and GKE (GCP) managed Kubernetes, set up multi-node clusters, and deployed containerized applications.
- Set up a Jenkins master and multiple slaves as part of the CI/CD process.

- Created Python scripts for various application-level tasks to implement automation.
- Implemented Kubernetes manifests and Helm charts to deploy microservices into Kubernetes clusters.
- Used Kubernetes to deploy, scale, load balance and manage Docker containers.
- Involved in migrating workloads from other platforms to AWS and GCP with minimal downtime.
- Set up infrastructure and application monitoring and alerting using Prometheus, Grafana, AWS CloudWatch and GCP Cloud Monitoring.
- Managed Kubernetes applications with Helm, created reproducible builds, and managed manifest files and releases of Helm packages.
- As part of CI/CD, developed build scripts, and maintained and scaled infrastructure for Dev, QA and Production on AWS and GCP.

Your Sincerely

Place: Bangalore
